Deploy a Website via Ansible

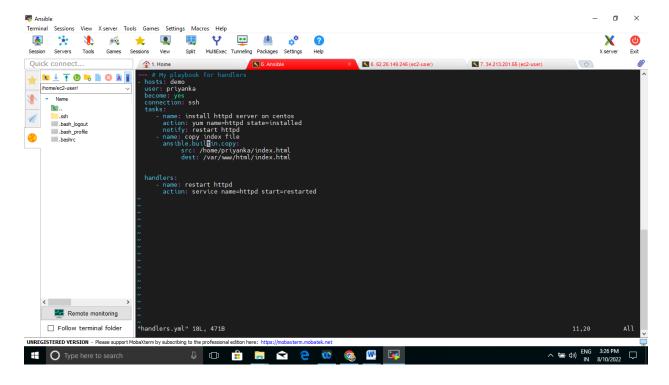

- Create a ansible machine and 2 nodes
- Give connection to all the node

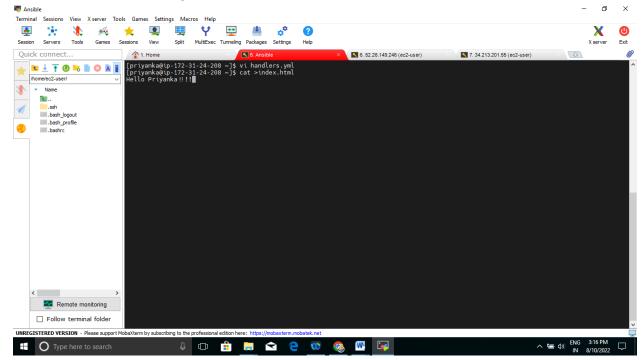

• Create a playbook in ansible vi handlers.yml

• Write the below code ,give esc : wq to save and quit

Create a index.html file using cat command

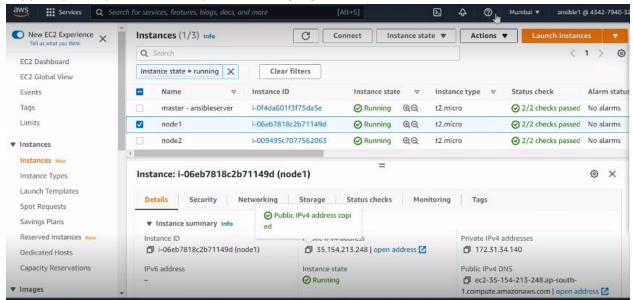

- · After creating index.html file
- To run give ansible-playbook handlers.yml

```
172.31.43.235 : ok=0 changed=0 unreachable=1 failed=0 skip
[akshat@ip-172-31-43-176 ~]$ vi handlers.yml
[akshat@ip-172-31-43-176 ~]$ ansible-playbook handlers.yml
```

The files are changed

• Copy the public ip of node 1 and paste it in the google chrome

• The static website will be launched
